❖ ABOUT ME

Senior Front-End Developer (React, Next.js, JavaScript, TypeScript) with **5 years of shipping production UIs** in **MTN Irancell** telecommunications, e-learning, and **SaaS**, including a wallet module used by thousands of people. Built an **AI-powered search and chat assistant** for Ariana Labs' KBS that cut search time by 50%. Designed a Turborepo monorepo for a multi-package admin platform, **mentored junior developers**, and owned accessibility, performance, and payment flows end-to-end. Experienced in **AI-assisted development** workflows that accelerate delivery without compromising code quality.

❖ SKILLS

- **Product Management & Product Ownership**
- **JavaScript · TypeScript** · React · **Next.js** · SSR · HTML5 · CSS/SASS
- Responsive Design · Accessibility (a11y) · **SEO** · Core Web Vitals
- Jest · Playwright · TDD · Storybook
- Turborepo · Vite · Git · Docker · CI/CD (GitHub Actions, Dokploy)
- **SOLID · Agile/Scrum** · AI-Assisted Development · Node.js

❖ PROFESSIONAL EXPERIENCE

Fullstack Freelance Developer

Apr 2026 – Present

- Built a **multi-tenant** Instagram Shop for 20 shops, turning Instagram posts into storefronts with landing pages and an admin panel using Next.js, React, TypeScript, and Prisma.
- Built Hashtag Network, an interactive gallery installation that connected visitors through shared hashtags in a live, force-directed graph, engaging 400+ users during a one-month public demo. Stack: **Electron**, React, TypeScript, D3.js.

Edora Media (working on Access Training platform)

Oct 2025 – Mar 2026

Senior Front-End Developer

- Architected a **Turborepo monorepo** with 1 app and 7 shared packages, including a form builder and reusable UI components such as dynamic tables, reducing code duplication by 40%.
- **Brought 3 flows to WCAG 2.1 AA** with focus management and keyboard support verified with screen-reader testing.
- Built the student payment portal (Vite, Stripe), processing thousands of users per month
- **Improved LCP from 6 to 2 seconds for 5 pages** via image optimization, code splitting, caching, and lazy loading.
- Applied **test-driven development (TDD) to build and test 100+ reusable UI components** at Edora Media, each documented with Storybook stories and usage descriptions.

Ariana Labs (Vendor at MTN Irancell)

Apr 2023 - Sep 2025

Senior Front-End Developer

- Built an **AI-powered search and chat assistant** for Ariana Labs' Knowledge Base System (KBS), cutting time spent on information retrieval by 50%
- Owned and led the front end for a **Knowledge Base system** (JavaScript, React, MUI) with full-text search, used by thousands of employees, reducing time-to-answer by 20%.
- Built gamification (Quiz and leaderboard features) that raised weekly active users by 10% according to MTN Irancell.
- Centralized state in Redux, added a shared API client, and **decoupled modules**, cutting bug counts.
- Mentored 3 junior developers by assigning development tasks, **reviewing their implementations, and providing actionable feedback** on coding issues and areas for improvement.
- **Mitigated XSS vulnerabilities** by sanitizing user input and backend-provided HTML with DOMPurify before rendering via React's dangerouslySetInnerHTML, adding regression tests.

Front-End Developer

- **Built the Jib Jet digital wallet** (balance, top-up, transaction history) in the My Irancell PWA
- Contributed to the **Backend-for-Frontend** layer, shared with the native app and serving millions of daily requests.
- Reviewed proposed features in monthly sprint planning with product owners, **flagging UX and business-logic flaws** (e.g., filter behavior) before development started.

Fan Agin

May 2021 - May 2022

Junior Front-End Developer

- Developed a CRM and contract management platform using React, Redux, and Redux-Saga.
- Implemented **Multi-column client-side sorting** that removed server round trips for thousands-of-rows tables.

❖ OPEN-SOURCE CONTRIBUTION

- Contributed to the **Slog-View** VS Code extension: *Beautiful structured log viewer for debugging. Automatically transforms JSON/logfmt logs into readable, interactive output with syntax highlighting, filtering, and search.*
- **React Special Cursor** package on npm: *A React custom cursor that can decorate your site; your hand is open to manipulate the cursor with CSS*
